```
Rdb match is contact #1 in message recorded at 03/08:00:00
 This function allows you to browse a file. It can be either a
 Repeat file or an ASCII file. The file must contain ASCII text.
 Binary files such as LINK or TACFIRE will not work properly.

 The file is initialy positioned to the line which matches the specified
 TOR. This is the Repeat Time for Repeat files, or the "TOR:" line
 for ASCII files.

   MATCH - Repositions file to the line of the matching TOR.

  SEARCH - Prompts for a search string and searchs for it beginning
           with the line following the line at the top of the screen.
           The screen will be redisplayed with the line containing
           the found string at the top of the screen.

 Use the key pad to transverse the file. Left and right arrows will
 shift the display left or right. The time (or line number) at the lower
 left corner of the screen is the time (or line number) of the line at the
 top of the screen. To display the times (or line numbers) for each line,
 shift left of column 1.

 Press any key to continue.
